## Experience

Aug 2023 - Present	<b>Graduate Student Researcher in <i>The Active Vision and Neural Computation Lab</i></b> Studying neural recordings from free-viewing primates. Building a foundation model for Primate V1. Also modeling neural recordings with Sparse Coding.
Jun 2020 - May 2023	<b>Researcher at ICSI (International Computer Science Institute)</b> <b><i>The Effects of Whitening in Neural Networks:</i></b> We modified Batch Normalization to decorrelate the feature map. We found whitening to improve ResNet training on CIFAR-100 by over 2 percent. Collaborated with Professor Yu, Yubei Chen, and Peter Wang. <b><i>Meibography Artificial Intelligence:</i></b> Used computer vision and classical machine learning techniques to predict eye diseases. Collaborated with Professor Yu, Professor Lin, and Peter Wang.
Aug 2021 - May 2023	<b>Student Research Assistant at CRC (Clinical Research Center)</b> <b><i>EasyTear Lipid Layer Analysis:</i></b> Using computer vision techniques on videos of eye to determine lipid layer motion and thickness. Collaborated with Professor Lin, Professor Yu, Peter Wang.
Aug 2022 - Dec 2022	<b>Machine Learning Engineer at Aizip</b> Startup in the tinyML space where ML models are deployed to IoT devices. Worked on people detection and fall detection.
May 2017 - Aug 2017	<b>NASA Ames Research Center Intern</b> Worked in the Tensegrity Robot Division. Contributed to an open source web based tensegrity robot simulator. Used machine learning evolutionary algorithm to locomote twelve-rod tensegrity structures in simulation.
